

III. CLAIM AMENDMENTS

1. (Original) A device for rolling food product slices (1) which comprise a first end (2) and a second end (3), having

-optionally a bending means (4), with which the first end (2) of the food product slice (1) may be bent,

-at least one conveying means (5,5'), with which the food product slice (1) may be transported and

-a means (6), located above the conveying means (5), which optionally bends the food product slice and rolls up the bent food product slice (1).

2. (Original) A device according to claim 1, characterised in that the bending means (4) is a roller, which is preferably height-adjustable.

3. (Currently Amended) A device according to claim 1 ~~or 2~~, characterised in that the bending means (4) is arranged between a slicer (7) and the conveying means (5) in the trajectory of a severed food product slice (1).

4. (Currently Amended) A device according to claim 1 ~~or 2~~, characterised in that the bending means is arranged beneath the means (6).

5. (Currently Amended) A device according to claim ~~any one of~~ ~~claims 1-3~~, characterised in that the bending means (4) and the means (6) are of one-piece construction.

6. (Currently Amended) A device according to claim ~~any one of~~ ~~the preceding claims~~, characterised in that the means (6) consists of a flat and flexible material and is preferably a cloth.

7. (Original) A device according to claim 5, characterised in that the length and/or weight of the flexible material influences the size of the roll.

8. (Currently Amended) A device according to claim ~~any one of~~ ~~claims 1-5~~, characterised in that the means (6) is a belt.

9. (Currently Amended) A device according to claim ~~any one of~~ ~~the preceding claims~~, characterised in that the bending means (4) is height-adjustable and/or drivable.

10. (Original) A method for rolling food product slices, characterised in that the food product slices are partially bent and then rolled between a conveying means (5) and a means (6).

11. (Original) A method according to claim 10, characterised in that the finished food product rolls are rolled into packaging.

12. (Original) A method according to claim 11, characterised in that the rolls are packaged individually and/or in groups.
